PART
1

OVERVIEW

1.1 What is This Campaign

This is a grand strategy campaign set in the Star Wars galaxy at 2 BBY — two years before the Battle of Yavin and the destruction of the first Death Star. The Galactic Empire is at the height of its power, the Death Star is nearing completion, and the scattered Rebel cells are only just beginning to unite under the banner of the Alliance to Restore the Republic.

Two players — one commanding the Galactic Empire, one commanding the Rebel Alliance — compete across 29 sectors for galactic dominance. Every strategic decision made at the campaign level translates into real battles filmed and shared as video content. The campaign is a living story told through dice rolls, action declarations, and the chaos of actual RTS gameplay.

1.2 The Three Game Layers

The campaign operates on three simultaneous layers:

Layer	System	What Happens Here
Strategic	TTRPG (this rulebook)	Players declare actions, spend AP, manage Political Will, move forces between sectors. All decisions happen here.
Ground Battles	Men of War: Assault Squad 2 + Galaxy at War Mod	GM films ground engagements using GEM editor scripted scenarios. Morale, casualties, and objectives are resolved here.
Space Battles	Star Wars: Empire at War: Forces of Corruption + Awakening of the Rebellion	GM films fleet engagements. Transport survival determines what ground forces can land.

1.3 How Battles Work

IMPORTANT — Players Do Not Watch Battles Live

When a battle is triggered during a session the players note which forces are engaged and where. The battle is NOT resolved at the table. After the session ends the GM sets up and films the battle in Men of War or AotR, edits the footage, and posts the video. Players watch the video and learn the outcome before the next session begins. The next session opens with the GM updating the Sector Command document to reflect casualties, sector control changes, and commander status.

1.4 Factions

THE GALACTIC EMPIRE — The dominant military and political force in the galaxy. Commands the largest fleet and army ever assembled. Has 4 Action Points per turn. Primary goal: eliminate the Rebel Alliance and complete the Death Star before the Rebels can unite. Starting Political Will: 15.

THE REBEL ALLIANCE — A coalition of cells, freedom fighters, and defectors united by the Declaration of the Rebellion at Dantooine. Outgunned but mobile and motivated. Has 3 Action Points per turn. Primary goal: grow the Alliance, protect their bases, and prevent Death Star completion. Starting Political Will: 20.

1.5 Campaign Timeline

The campaign begins at 2 BBY. Each campaign turn represents one week of in-universe time. The Death Star Construction Track begins at Step 0 and advances toward Step 5 — Full Operational Capability — which represents Yavin 4 and an Imperial victory condition. The Rebel Alliance must prevent this or achieve their own victory conditions before it completes.

PART
2

THE GALAXY

2.1 Sectors and Regions

The galaxy is divided into 29 sectors organized across 7 regions. Each sector is the fundamental unit of campaign play — forces are assigned to sectors, battles happen in sectors, and sector control determines strategic advantage.

Region	Sectors	Strategic Character
Core Worlds	5 sectors	Imperial heartland. Coruscant, Kuat, Corellia. Heavily fortified. Rebel operations here are rare and costly.
Colonies	3 sectors	Industrial worlds. Key supply chains. Less garrisoned than Core but still Imperial-controlled.
Inner Rim	3 sectors	Buffer zone. Mixed loyalty. Several sectors contested at campaign start.
Expansion Region	2 sectors	Thinly garrisoned. Imperial patrol presence. Rebel cells active.
Mid Rim	5 sectors	Active conflict zone. Lothal, Ryloth, Mandalore — key battlegrounds of 2 BBY.
Outer Rim	10 sectors	Rebel stronghold regions. Long supply lines for the Empire. Phoenix Squadron territory.
Hutt Space	1 sector	Neutral. Hutt Cartel controls this space. Neither faction can operate freely here.

2.2 Sector Control States

Every sector has a control state that determines who can operate there freely:

State	Meaning	Effect
IMPERIAL	Full Imperial control	Empire operates freely. Rebels must spend extra AP for operations here. Rebel raids are high risk.
REBEL	Rebel Alliance controls this sector	Rebels operate freely. Imperial assaults require full Planetary Assault action.
CONTESTED	Both factions active — no clear control	Both sides operate with limitations. Regular battles expected. Event cards frequently target contested sectors.
NEUTRAL	Neither faction controls this sector	No military presence. Either faction can operate here without opposition.
HUTT SPACE	Hutt Cartel territory	Special rules apply. Neither faction can openly garrison here without triggering Hutt neutrality.

2.3 Supply Chains

Every sector has a supply chain connecting it to adjacent sectors. If a supply chain is cut by enemy action — blockade, sector lockdown, or enemy control of adjacent sectors — the affected sector's supply degrades. Supply status affects morale, action capability, and sustained operations.

Supply chains are listed on each sector card in the Sector Command document. The GM tracks these chains and updates supply status at the end of each turn during Phase 4 cleanup.

PART
3

TURN STRUCTURE

Each campaign turn represents one week of in-universe time. A turn has exactly four phases that must be resolved in order. Players should use the Turn Tracker document to record all declarations and outcomes.

Phase	Name	Who Acts	What Happens
01	Strategic Planning	Both players simultaneously	Each player secretly writes their action declarations on the Turn Tracker. No discussion, no reveals. Declarations are binding once written.
02	Event Card	GM draws	The GM draws one event card from the appropriate deck and reads it aloud. Its effect is resolved immediately before Phase 3.
03	Action Resolution	Both players reveal simultaneously	Both players reveal their Phase 1 declarations at the same time. Actions are resolved — offensive actions first, then all others. Battles are noted for filming.
04	Cleanup	GM	Update supply status, Political Will, sector control from battle results. Roll commander casualty dice for any named commanders in battles. Advance turn counter.

3.1 Phase 1 — Secret Action Declarations

This is the strategic heart of the campaign. Both players simultaneously and secretly write down everything they intend to do this turn on their respective Turn Tracker tabs. Declarations must include the action type, target sector, forces committed, and any named commanders involved.

Declarations are binding. Once written they cannot be changed. The only exception is retreat — a defender may declare retreat in Phase 3 when they see what is coming at them.

Declaration Format

Action Type — Target Sector — Forces Committed — Commander (if any) — Transport configuration (if moving ground forces)

Example Imperial: "Planetary Assault — Atollon Sector — Seventh Fleet + Lothal Garrison Corps — Thrawn commanding fleet — 12 Gozantis carrying 1 Company (2 AP move + 2 AP assault = 4 AP total)"

Example Rebel: "Raid — Lothal Sector — Ghost Crew strike team — Kanan Jarrus present — no fleet movement required (1 AP)"

3.2 Phase 2 — Event Card

The GM draws one event card from the event card deck. There are four decks — Imperial, Rebel, Galaxy-Wide, and Wild Cards. The specific deck drawn from is determined by the current campaign state. See Part 12 for full Event Card rules.

Wild Card W-01 — Battle of Atollon — is mandatory and must be played when the Seventh Fleet is in position to engage Phoenix Squadron. All other Wild Cards are drawn randomly.

3.3 Phase 3 — Action Resolution

Both players reveal their declarations simultaneously. The GM then resolves all declared actions in priority order:

Priority	Action Types	Reason
1 — First	Offensive actions: Planetary Assault, Full Assault, Raid, Fleet Engagement	Attacks determine the state of the sector before any other action can execute. A supply run cannot complete if the sector is under assault.
2 — Second	Everything else: Movements, Supply Runs, Diplomatic Missions, Intel Operations, Garrison Reinforcement, Blockade, Cell Insertion, Fortify	Non-offensive actions resolve after the combat situation is established.

3.4 Phase 4 — Cleanup

At the end of every turn the GM performs the following cleanup steps in order:

1. Update all force card headcounts based on battle results (if battles were already filmed) or note pending updates
2. Check and update supply status for all sectors — trace supply chains from the Sector Command document
3. Adjust Political Will for both factions based on events, battles, and event card effects
4. Update sector control states — any sector where the defending force was destroyed or retreated changes control
5. Roll commander casualty dice for every named commander who participated in a battle this turn
6. Check Death Star Construction Track — advance if any Death Star Advance actions were declared
7. Advance the turn counter in the Sector Command document

PART
4

ACTION POINTS

Action Points (AP) represent the strategic capacity of a faction to conduct operations in a given week. Both factions have a base AP allowance that can be modified by Political Will, named commander presence, and campaign conditions.

4.1 Imperial Action Points

Base: 4 AP per turn

Condition	AP Modifier
Tarkin active and not in transit	+1 AP
Imperial Political Will below 5	-1 AP
Imperial Political Will at 20	+1 AP
Multiple modifiers stack	Apply all applicable modifiers

4.2 Rebel Action Points

Base: 3 AP per turn

Condition	AP Modifier
Mon Mothma active and not in transit	+1 AP
Rebel Political Will below 5	-1 AP
Rebel Political Will at 20	+1 AP
Multiple modifiers stack	Apply all applicable modifiers

4.3 Imperial Action List

Action	AP Cost	Description
Move Commander	1 AP	Move a named commander to an adjacent sector. Cannot use specialty same turn.
Move Fleet	1 AP	Move a fleet from one sector to an adjacent sector.
Move Ground Force	1 AP	Move ground forces from one sector to another — requires a fleet with transports in the same sector.
Planetary Assault	2 AP	Full invasion of a sector. Commits all forces in attacking sector. Space battle first if defender has a fleet.
Full Assault	2 AP	Major ground commitment at battalion scale. Does not require fleet superiority first.

Fleet Engagement	1 AP	Declare a space battle against a specific enemy fleet.
Orbital Bombardment	2 AP	Bombard a planet from orbit. Requires fleet with ISD presence. Reduces sector supply and political stability.
ISB Crackdown	1 AP	Deploy ISB agents to sweep a sector for Rebel cells. Can disrupt cell insertions and intelligence operations.
Garrison Reinforcement	1 AP	Add specified units to a force or fleet. Player declares exactly what is added. GM approves if logistically feasible. Drops sector supply one tier.
Sector Lockdown	1 AP	Seal a sector — restricts enemy movement through it. All non-combat actions by the enemy in that sector require additional AP next turn.
Death Star Advance	2 AP	Advance the Death Star Construction Track by one step.
Intel Operation	1 AP	Gather intelligence on enemy forces in a sector. Reduces uncertainty in the next engagement there.
Blockade	1 AP	Establish a blockade of a sector. Rebel supply runs through that sector automatically fail while the blockade holds.
Emergency Deploy (Rating 5)	0 AP + 1 PW	Tarkin or Vader can be deployed to any sector in one turn at no AP cost but costs 1 Political Will.
Saw Gerrera Deploy	0 AP + 1 PW	Deploy Saw Gerrera's Partisans to a battle. Costs 1 PW. Triggers Rogue Roll. See Commander rules.

4.4 Rebel Action List

Action	AP Cost	Description
Move Commander	1 AP	Move a named commander to an adjacent sector. Cannot use specialty same turn.
Move Fleet	1 AP	Move a fleet from one sector to an adjacent sector.
Move Ground Force	1 AP	Move ground forces — requires fleet with GR-75 transports.
Raid	1 AP	Small strike team action — squad to platoon scale. Does not commit full sector forces. Uses Entry 001-003 in Men of War.
Full Assault	2 AP	Major assault at battalion scale. Commits significant forces. Uses Entry 007-008.
Fleet Engagement	1 AP	Declare a space battle against a specific enemy fleet.
Diplomatic Mission	1 AP	Attempt to bring a neutral sector or faction to the Alliance. Success adds Political Will and potentially sector forces.
Cell Insertion	1 AP	Insert a covert Rebel cell into an Imperial-controlled sector. If successful adds a small ground presence. Can be detected by ISB Crackdown.

Supply Run	1 AP	Run supplies from one sector to another. Restores supply status one tier. Can be intercepted by Imperial blockade or fleet.
Rescue Mission	1 AP	Attempt to recover a captured commander or agent. Small team operation — Entry 004-005 scale.
Intel Operation	1 AP	Gather intelligence on Imperial forces. Reduces uncertainty in next engagement. Yularen can detect this.
Fortify	1 AP	Improve defensive positions in a sector. Defending forces get morale bonus in next battle in that sector.
Saw Gerrera Deploy	0 AP + 1 PW	Deploy Saw's Partisans alongside rebel forces. Costs 1 PW. Triggers Rogue Roll before battle.

4.5 Garrison Reinforcement — Detailed Rules

Garrison Reinforcement Rule

When a player declares Garrison Reinforcement they must specify EXACTLY what is being added to which force or fleet. The GM approves the request only if it is logistically feasible — you cannot reinforce Lothal with AT-ATs if there is no practical way to get AT-ATs to Lothal.

SUPPLY COST: Every Garrison Reinforcement action drops that sector's supply one tier. Nominal becomes Reduced. Reduced becomes Critical. You cannot Garrison Reinforce a sector already at Critical supply.

TIMING: Reinforcements take effect immediately — the force is updated in the Sector Command document at the end of Phase 3.

COMMON USES: Adding Gozantis to a fleet without transport capability. Adding heavy weapons teams to a garrison. Adding fresh troops to a depleted force.

PART
5

POLITICAL WILL

Political Will (PW) represents the faction's political momentum, public support, and the resolve of its leadership. It is not simply morale — it is the capacity of a faction to take bold action, spend resources on risky operations, and maintain cohesion under pressure.

Starting Values: **Empire** — 15 PW | **Rebel Alliance** — 20 PW

PW range: 0 minimum, 20 maximum.

5.1 How PW is Gained

Event	PW Gained	Faction
Major battle victory (decisive)	+2 PW	Winner
Major battle victory (moderate)	+1 PW	Winner
Commander — Heroic result on casualty roll	+1 PW	Commander's faction
Mon Mothma active (Rebel — per turn)	+1 PW	Rebel Alliance
Diplomatic Mission success	+1 to +3 PW	Rebel Alliance
Successful Raid on high-value target	+1 PW	Rebel Alliance
Death Star Advance action completed	+1 PW	Empire
Event card effect	Varies	As specified

5.2 How PW is Lost

Event	PW Lost	Faction
Major battle defeat (decisive)	-2 PW	Loser
Major battle defeat (moderate)	-1 PW	Loser
Named commander KIA	-1 PW	Commander's faction
Commander captured by enemy	-1 PW	Commander's faction (enemy gains +2)
Orbital Bombardment (civilian casualties)	-1 PW	Empire
Saw Gerrera friendly fire incident	-2 PW	Rebel Alliance
Event card effect	Varies	As specified
PW cannot go below 0	—	—

5.3 PW Effects on AP

PW Level	AP Effect
PW = 0 to 4	-1 AP per turn — faction is in crisis, leadership fractured
PW = 5 to 19	No modifier — standard operations
PW = 20	+1 AP per turn — faction is at peak momentum

5.4 PW Collapse — Losing the Campaign

Political Will Collapse

If a faction's Political Will reaches 0 and remains there for 3 consecutive turns the faction has lost the campaign. The Empire fractures under the weight of its overreach, or the Alliance collapses and the scattered cells surrender.

This is one of two ways to win the campaign. The other is the Death Star victory condition for the Empire, or the specific Rebel objectives. See Part 16.

PART
6

FORCES

6.1 Force Cards

Every ground force and fleet in the campaign is represented by a Force Card in the Sector Command document. Force cards track the name, commander, home base, deployment location, strength, formation, headcount, and composition of every force in the galaxy.

Force cards are the source of truth for everything. If it is not on the card it is not in the battle. If you want something on the card you must spend AP to put it there.

6.2 Ground Force Hierarchy

Formation	Size	Commander Rank	Notes
Strike Team	4-6 fighters	Corporal / Sergeant	Rebel SpecForce only. Smallest deployable unit.
Squad	9 troops	Sergeant	Basic tactical unit. Both factions.
Platoon	36 troops (4 Squads)	Lieutenant	1 Platoon = 1 Gozanti or GR-75 transport load.
Company	144 troops (4 Platoons)	Captain	Has 2 Heavy Weapons Squads automatically attached.
Battalion	576 troops (4 Companies)	Major	Has 2 HWS per Company = 8 HWS total.
Regiment	2,304 troops (4 Battalions)	Colonel	Major operation — Planetary Assault scale.
Battlegroup	9,216 troops (4 Regiments)	General	Full sector force deployment.
Corps	36,864 troops (4 Battlegroups)	Lieutenant General	Extreme scale — Core Worlds only.
Army	73,728 troops (2 Corps)	General	Maximum Imperial deployment.

6.3 Heavy Weapons Rule

Heavy Weapons Squads — Automatic Attachment

Every Company-sized force or larger automatically has 2 Heavy Weapons Squads (HWS) attached. This does not need to be noted on the force card — it is a standing rule.

Squad (9 men) — rifles only. No HWS.

Platoon (36 men) — rifles only. No HWS.

Company (144 men) — 2 HWS automatically included.

Battalion (4 Companies) — 8 HWS total (2 per Company).

Regiment and above — 2 HWS per Company throughout.

A Heavy Weapons Squad consists of: 1 E-Web crew team (3 men), 1 missile launcher team (3 men), 1 DLT-19 heavy blaster team (3 men). Total: 9 men per HWS.

In Men of War: when the GM sets up a Company-scale or larger battle, 2 HWS elements are placed on the field in addition to the standard rifle squads. Their placement is determined by the terrain and mission type.

To add HWS to a Platoon or smaller force — spend 1 AP on Garrison Reinforcement. Drops supply one tier.

6.4 Strength States

State	Headcount	Effect
Full Strength	76% to 100% of original	No penalties. Force operates at full capacity.
Reduced Strength	51% to 75% of original	Morale state shifts one tier down. Cannot initiate Planetary Assault.
Depleted	26% to 50% of original	Morale state shifts two tiers down. Can only defend or conduct Raids.
Destroyed	0% to 25% of original	Force is combat ineffective. Must be rebuilt via Garrison Reinforcement over multiple turns.

6.5 Fleet Cards

Fleet cards work identically to ground force cards. They list every ship class and count assigned to that fleet. In space battles the GM places exactly the ships listed on the fleet card in AotR. Ships destroyed in battle are removed from the fleet card — the fleet is permanently smaller after each engagement until reinforced.

Fleet Tier is listed on each fleet card and determines the scale of the AotR engagement. See the Naval Order of Battle document for fleet tier definitions and AotR unit equivalents.

PART
7

TRANSPORT RULES

Ground forces cannot move between sectors under their own power. They require starships to transport them through hyperspace. This creates a critical dependency — if a fleet loses its transports, the ground forces it was carrying are either stranded or destroyed.

7.1 Imperial Transport — Gozanti-class Cruiser

Gozanti-class Cruiser — Transport Capacity

Each Gozanti carries: 1 Platoon (36 troops) inside the vessel

PLUS one of the following on exterior docking clamps:

- Option A: 2 AT-AT Walkers
- Option B: 4 AT-ST Walkers
- Option C: 4 TIE Fighter/Bomber variants (instead of walkers)

The configuration must be declared before the battle. A Gozanti cannot carry both walkers and TIE fighters simultaneously.

Gozantis are NOT combat vessels. In AotR they are placed at the rear of the formation. If the Rebel fleet breaks through and reaches them anything can happen to them — and the troops aboard are lost if the ship is destroyed.

7.2 Rebel Transport — GR-75 Medium Transport

GR-75 Medium Transport — Transport Capacity

Each GR-75 carries: 1 Platoon (36-40 troops) in sealed passenger pods

The GR-75 has NO walker docking capability. It is infantry and light equipment only. Speeder bikes and light repulsorcraft can be carried but no AT-ATs, AT-STs, or heavy armor.

ADVANTAGE: The GR-75 hull is sensor-resistant. Imperial patrols have difficulty detecting GR-75s during supply runs — this is why the Rebellion uses them extensively for logistics operations.

GR-75s are unarmed. They are priority targets in any space battle. Phoenix Squadron has 2 GR-75s — losing both means all rebel ground forces are stuck where they are.

7.3 Transport Requirements

The following rules apply to all transport operations:

- Ground forces CANNOT move between sectors without a fleet carrying transports in the same sector.
- The fleet must be in the SAME sector as the ground force to pick them up.
- A fleet with no Gozantis (Imperial) or GR-75s (Rebel) is a combat-only fleet and cannot transport troops.
- Moving a fleet to pick up troops costs 1 AP. Moving the troops with the fleet costs another 1 AP.
- To add transports to a fleet that does not have them — declare Garrison Reinforcement (1 AP, drops supply one tier).

— Surviving transports after a space battle determine the size of the ground force that can land.

7.4 Landing Force Determination

After the space battle the GM counts surviving transports and determines the landing force:

Surviving Transports	Landing Force	Men of War Entry
0 — All transports destroyed	No ground forces land. Assault fails even if space battle won.	N/A
1-2 transports	1-2 Platoons (36-72 troops) + walkers if configured	Entry 002-003
3-4 transports	3-4 Platoons (~1 Company) + walkers	Entry 004-006
5-8 transports	5-8 Platoons (~2 Companies) + walkers	Entry 007-008
9+ transports	Full assault force — Battalion scale or above	Entry 009-011

PART
8

ENGAGEMENT RULES

8.1 Declaring an Attack

An attack is declared in Phase 1 and must include: action type, target sector, attacking forces, commander (if any), and transport configuration (if bringing ground forces). The declaration is binding.

Attack Scale by Action Type

RAID (1 AP) — Squad to Platoon scale. Small strike team only — not the full sector force. Entry 001-003 in Men of War.

FULL ASSAULT (2 AP) — Battalion scale. Major ground commitment. Entry 007-008.

PLANETARY ASSAULT (2 AP) — Regiment scale. Everything in the sector commits. Entry 009-011.

FLEET ENGAGEMENT (1 AP) — Full fleet vs fleet. AotR only. No ground forces involved.

Note: For Raids and Intel Operations the GM selects a representative element from the sector force — not the full force. A garrison of 9,000 men does not send everyone to fight a 6-man strike team.

8.2 Action Priority — Offensive Actions First

When Phase 3 begins all offensive actions resolve before anything else. If the Empire declares a Planetary Assault on Atollon the same turn the Rebels declared a Supply Run through Atollon — the assault resolves first and the supply run automatically fails because the sector is now under attack.

8.3 Meeting Engagement

Meeting Engagement Rule

If both players declare offensive actions targeting the same sector in the same turn a Meeting Engagement is triggered. Neither side gets the attacker advantage.

- Neither side can declare retreat in Turn 1 of a Meeting Engagement — you walked into each other.
- Retreat becomes available from the following turn onward.
- In Men of War both forces set up in the middle of the map advancing toward each other — not attacker vs defender.
- No attacker/defender morale distinction — both sides use their actual morale state.

8.4 Space Battle Rules

If the attacking player is bringing forces to a sector with an enemy fleet a space battle happens first. Ground forces cannot land until the space battle resolves.

Space Battle Result	Consequence
Attacker wins — transports survived	Ground forces land. Ground battle happens next. Entry determined by surviving transport count.

Attacker wins — transports destroyed	Attacker controls orbit but has no troops. Assault fails. Can bombard but cannot take the planet.
Attacker loses — transports survived	Fleet retreats with ground forces aboard. Troops take no casualties. Assault fails — try again next turn.
Attacker loses — transports destroyed	Catastrophic failure. Fleet retreats or destroyed. Troops are dead. Both the battle and the troops are lost.
No defending fleet present	Attacker wins space automatically. Transports land unopposed.

8.5 Ground Battle Rules

After a successful space battle (or when no space battle is required) the ground battle is set up in Men of War. The GM reads the force cards for both sides and sets up the scenario based on:

- Force card composition — every unit listed on the card appears on the field
- Surviving transport count — determines how many attacking troops landed
- Morale state — see Part 9 for full morale determination
- Action type — determines Force Scaling Guide entry and map size
- Named commanders — if declared in Phase 1 they are present on the field
- Heavy weapons — 2 HWS per Company automatically included at Company scale and above

8.6 Retreat Rules

The defending player may declare retreat in Phase 3 when both declarations are revealed and before any battle is filmed. The retreating player announces the retreat and the GM calculates casualties based on the retreat type.

Retreat Type	Situation	Casualties
Clean Retreat	Declared immediately in Phase 3 — no prior contact	10% of force lost
Fighting Retreat	Forces were already engaged in previous turns in this sector	25-40% of force lost
Desperate Retreat	Force is already below 50% strength before retreating	50%+ of force lost
Cannot Retreat	Interdictor present in orbit — gravity wells engaged	Must fight or surrender — no retreat possible
Meeting Engagement Turn 1	Neither side can retreat in a Meeting Engagement on the turn it is triggered	No retreat available — fight it out

8.7 Post-Battle Procedures

After every battle — space or ground — the GM performs the following:

1. Update all force card headcounts in the Sector Command document

2. Remove or note destroyed ships from fleet cards
3. Update sector control if the battle decided it
4. Roll commander casualty dice (1d6) for every named commander who participated
5. Apply Political Will changes based on battle outcome
6. Check supply effects — battles can disrupt supply chains
7. Post the battle video for players to watch before the next session

PART
9**MORALE SYSTEM**

Morale is not a tracked number — it is a state derived from three campaign factors for each force before every battle. The GM determines morale state and loads the corresponding GEM editor trigger scripts into the Men of War scenario.

9.1 The Three Morale Factors

Before every ground battle the GM checks three things for EACH side independently:

1. **SUPPLY STATUS** — from the force's sector card in the Sector Command document (Nominal / Reduced / Critical)
2. **HEADCOUNT** — current troops vs original strength percentage
3. **NAMED COMMANDER PRESENT** — was a named commander declared in Phase 1 for this battle?

9.2 Morale State Determination

Morale State	Conditions Required	GEM Trigger Script
HIGH	Supply Nominal + above 75% strength + named commander present	STEADY — units hold on lieutenant death. Best possible performance.
STEADY	Supply Nominal + above 75% strength — no commander	STEADY — units hold on LT death but less aggressively.
SHAKEN	Supply Reduced OR strength 50-75%	BROKEN — units rout on any lieutenant death with staggered delay.
BATTERED	Supply Critical OR strength below 50%	BROKEN — units rout on any commander death. Partial collapse cascades.
BROKEN	Below 25% strength OR Critical supply + no commander	Cannot initiate attack. Routes when engaged. Force retreats automatically.

9.3 Commander Morale Modifier**Named Commander Effect on Morale**

A named commander present on the battlefield shifts morale ONE TIER UP:

- SHAKEN becomes STEADY with a named commander present
- BATTERED becomes SHAKEN with a named commander present
- STEADY becomes HIGH with a named commander present

Conversely, the ABSENCE of a named commander when one would normally be expected can shift morale one tier DOWN — apply this at GM discretion when a force has historically relied on commander leadership and the commander is absent.

9.4 GEM Editor Trigger Scripts

The morale state determines which pre-built trigger script is loaded into the Men of War scenario. See the GEM Editor Scripting Reference document for the full script code and trigger conditions.

Script Set	Triggers On	Effect
STEADY	Lieutenant death	Squads in that platoon hold formation. Morale holds. Battle continues normally.
BROKEN	Lieutenant death	Squads in that platoon rout after a staggered delay. Some may hold, most flee.
CPY_CMD_KIA	Company commander death	Partial collapse — some platoons hold, some rout. Unpredictable and dramatic.
SAW_WITHDRAWAL	Saw Rogue Roll result 3-4	Saw's men begin extraction sequence. They withdraw from battle regardless of outcome.
SAW_FRIENDLY_FIRE	Saw Rogue Roll result 1-2	Saw's Partisans assigned to Player 2 in F2 — they fight everyone including Rebels.

PART
10

NAMED COMMANDERS

Named commanders are the 14 historical figures of the Galactic Civil War who have Command Ratings and special rules that affect campaign play. They are not just morale bonuses — they are strategic assets that must be positioned, protected, and risked at the right moment.

10.1 Command Ratings

Every named commander has a Command Rating from 1 to 5:

Rating	Designation	Commanders
5	Supreme Command	Tarkin, Thrawn, Vader, Mon Mothma
4	Senior Command	Krennic, Yularen, Bail Organa, Dodonna
3	Field Command	Konstantine, Pryce, Hera Syndulla
2	Tactical Command	Kallus, Captain Rex
1	Independent	Saw Gerrera

10.2 Moving Commanders

Commander Movement Rules

Moving a named commander costs 1 AP and is declared in Phase 1.

- Adjacent sector: arrives same turn. Cannot use specialty the turn they move.
- Two sectors away: 2 turns in transit. Unavailable both turns.
- Rating 5 commanders (Tarkin, Thrawn, Vader, Mon Mothma): can move any distance in 1 turn at the cost of 1 Political Will.

A commander must already be in the same sector as the force they intend to command. You cannot teleport Tarkin from Coruscant to lead the Lothal assault in the same turn — he must have been moved there in a prior turn.

10.3 Bringing a Commander to Battle

Declaring a commander for battle is done in Phase 1 as part of the attack or defense declaration. A commander can only participate in ONE battle per turn. The benefits and risks:

- BENEFIT: Morale shifts one tier up for all friendly forces in the battle
- BENEFIT: Commander specialty ability activates (see Named Commanders document)
- RISK: Commander rolls on the casualty table after every battle they participate in
- RISK: High Command Rating commanders are HIGH PRIORITY targets for the enemy

10.4 Commander Casualty Roll

After every battle a 1d6 casualty roll is made for each named commander who participated. Apply the battle outcome modifier to the roll:

Roll Result	Outcome	Effect
1	Killed in Action	Commander removed permanently. Faction loses 1 PW. All forces in sector lose morale bonus.
2	Captured	Commander is prisoner of the enemy. Enemy gains 2 PW. Can be rescued or exchanged.
3	Wounded	Commander out of action for 2 turns. Command Rating -1 while recovering.
4	Shaken	Command Rating -1 for next battle only. Back to full after.
5	Unharmd	No effect.
6+	Heroic	Faction gains +1 PW from the commander's distinguished performance.

Battle outcome modifiers to the roll:

- Victory — Light losses: +2
- Victory — Moderate losses: +1
- Defeat — Managed: -1
- Defeat — Heavy losses: -2
- Total loss / rout: -3

10.5 All Named Commanders — Quick Reference

Commander	Faction	Rating	Location	Key Specialty
Grand Moff Tarkin	Empire	5	Coruscant / Eriadu	Free Orbital Bombardment. Any contested sector with Tarkin has morale raised to High. +1 AP when active.
Grand Admiral Thrawn	Empire	5	Lothal Sector	Enemy forces roll casualties one tier worse. Seventh Fleet tier +1. Once per campaign: reveal hidden Rebel base.
Darth Vader	Empire	5	Coruscant	Rebel morale one tier lower vs Vader. Rebel commanders present must roll casualty table. Cannot be captured.
Director Krennic	Empire	4	Geonosis / Scarif	Death Star Track advances +1 per turn while Krennic is active. No AP cost.
ISB Dir. Yularen	Empire	4	Coruscant	1 free Intel action per turn. 50% chance to detect Rebel Cell Insertions automatically.

Commander	Faction	Rating	Location	Key Specialty
Adm. Konstantine	Empire	3	Lothal orbit	Rebel supply runs through Lothal automatically fail. Weakness: breaks formation to chase fleeing ships.
Governor Pryce	Empire	3	Lothal	1 free Crackdown on Lothal per turn. Weakness: no military expertise without Thrawn or Konstantine present.
Agent Kallus	Emp/Reb	2	Lothal Sector	1 free Intel sweep per turn. If Event R-03 drawn: defects to Rebels as Fulcrum. +2 Intel/turn for 3 turns.
Mon Mothma	Rebel	4	Atollon / Dantooine	+1 PW per turn active. Diplomatic Missions auto-succeed. +1 AP to Alliance. Non-combatant.
Bail Organa	Rebel	4	Alderaan	2 free Intel actions per turn. Adjacent Core World Diplomatic Mission difficulty reduced.
Gen. Dodonna	Rebel	4	Atollon / Massassi	Rebel forces in his sector fight as one morale tier higher. Tactical analysis reduces enemy surprise.
Hera Syndulla	Rebel	3	Atollon / Lothal	Phoenix Squadron fleet tier +1 when Hera commands. Supply Run to her sector costs 0 AP.
Captain Rex	Rebel	2	Atollon / Chopper Base	Ground forces in his sector get +1 morale determination. Trains Sector Force troopers.
Saw Gerrera	Independent	1	Various	Deploy costs 0 AP + 1 PW. Forces deal damage one tier higher. ROGUE ROLL required at Shaken morale or below.

**PART
11****DEATH STAR CONSTRUCTION**

The Death Star Construction Track is one of the central tension mechanics of the campaign. As the track advances toward Step 5 the Empire gains increasing advantages — and at Step 5 the campaign may end in an Imperial victory.

11.1 The Five Steps

Step	Name	Campaign Effect
Step 0	Construction Ongoing	No effects yet. Starting state.
Step 1	Framework Complete	Empire gains +1 PW. Tarkin becomes more aggressive — Reckless Overconfidence trait activates.
Step 2	Superlaser Fitted	Empire gains Orbital Bombardment at 1 AP (normally 2 AP) for the remainder of the campaign.
Step 3	Hull Complete	Empire gains +1 PW. Death Star can be moved as a strategic asset — it begins transit to operational position.
Step 4	Systems Online	Empire gains another +1 PW. The threat is now real and undeniable — Rebel Alliance must respond.
Step 5	FULLY OPERATIONAL	Imperial victory condition triggered. See Part 16.

11.2 Advancing the Track

The Death Star Construction Track advances through:

- Death Star Advance action (2 AP) — most common method
- Krennic's specialty — track advances 1 step per turn automatically while Krennic is active, at no AP cost
- Event cards — certain Imperial event cards advance the track

REBEL PRIORITY TARGET

The Death Star Construction Track is the Empire's most powerful long-term weapon. Rebel players should prioritize disrupting construction through targeted operations against Scarif (where the plans are stored) and Geonosis (construction site). Krennic's presence at either location significantly accelerates construction.

PART
12

EVENT CARDS

Event cards inject narrative chaos and opportunity into the campaign. One card is drawn every turn during Phase 2. Events can help one faction, hurt the other, or affect the entire galaxy.

12.1 The Four Decks

Deck	Cards	Nature of Events
Imperial Deck (I)	10 cards (I-01 to I-10)	Events that advantage the Empire. ISB successes, Death Star progress, Imperial military actions.
Rebel Deck (R)	10 cards (R-01 to R-10)	Events that advantage the Alliance. Defections, supply discoveries, diplomatic breakthroughs.
Galaxy-Wide Deck (G)	10 cards (G-01 to G-10)	Events affecting the whole galaxy. Neutral events that create opportunities or problems for both factions.
Wild Card Deck (W)	10 cards (W-01 to W-10)	Major narrative events. Unpredictable and dramatic. W-01 is mandatory.

12.2 W-01 — Battle of Atollon (Mandatory)

Wild Card W-01 — MANDATORY EVENT

The Battle of Atollon is not drawn randomly — it is a mandatory event that fires when the following conditions are met:

- The Seventh Fleet is in a position to engage Phoenix Squadron
- Thrawn has had at least one prior turn of triangulating Atollon's location (via Intel Operation or event)

When W-01 fires: Thrawn commits the full Seventh Fleet to Atollon. Two Interdictors are deployed — Phoenix Squadron CANNOT retreat. The battle must be fought.

This is the defining moment of the 2 BBY timeline. The outcome may differ from canon depending on campaign state — but the battle cannot be avoided once triggered.

PART
13

SPACE BATTLES — AWAKENING OF THE
REBELLION

Space battles are resolved using Star Wars: Empire at War: Forces of Corruption with the Awakening of the Rebellion mod. The GM sets up the battle, films it, and posts the video. Players watch the result — they do not control or observe the battle live.

13.1 GM Space Battle Setup

Before filming a space battle the GM:

1.

Checks both fleet cards in the Sector Command document — places exactly those ships in AotR
2.

Identifies which ships are Gozantis or GR-75s — places them at the rear of the attacking formation
3.

Notes fleet tier for both sides — determines if this is a Patrol Force, Sector Squadron, or Battle Squadron engagement
4.

Checks if any named commanders are present — attaches hero units in AotR if applicable
5.

Sets up the map — open space for fleet engagements, planetary orbit for planetary assaults
6.

Films the battle — does NOT favor either side. Sets up faithfully and lets AotR play out
7.

Counts surviving Gozantis/GR-75s after the battle — records the number

13.2 AotR Specific Rules

AotR Mechanic	Campaign Rule
Fighter flights (half squadron)	Ships launch half a squadron in AotR. TIE Fighters, TIE Interceptors, and TIE Bombers always launch full squadrons.
Capital ship turning speed	Large ships turn slowly in AotR. ISDs cannot respond quickly to flanking — the Rebel player knows this.
Retreat times	AotR gives Rebels shorter retreat time — reflects their hit-and-run doctrine. Rebels can disengage faster than Imperials.
Ion cannon impact	Ion hits have much larger effect in AotR than vanilla. A Y-wing ion salvo can temporarily disable ISD systems.
Interdictor gravity wells	When Interdictors are placed in AotR ships in their gravity well radius cannot jump to hyperspace — Rebels are trapped.
Ship upgrades	Dreadnaughts can be upgraded to Alliance Assault Frigates Mk I over planets with Alliance Medium Shipyards. This is a Garrison Reinforcement action.

**PART
14****GROUND BATTLES — MEN OF WAR**

Ground battles are resolved using Men of War: Assault Squad 2 with the Galaxy at War mod. The GM uses the GEM editor to script pre-built morale trigger scenarios and films the result. The Force Scaling Guide determines which entry (map, unit count, scale) is used.

14.1 Force Scaling Guide Entries

The action type and transport count determine which entry is used:

Entry	Scale	Action Type	Imperial Forces	Rebel Forces
001	Rebel Raid — Squad	Raid	1 Squad TK Stormtroopers (9 men)	Pathfinder Strike Team (4-6)
002	Imperial Assault — Company	Imperial action	1 Company TK Stormtroopers (144) + Scouts	1 Platoon Commandos + Sector Force Platoon
003	Ambush — Platoon	Raid	1 Platoon TK Stormtroopers (36)	Pathfinder Platoon (36) + Infiltrators
004	Manhunt — Specialist	Intel Op	1 Platoon + 2 Storm Commandos + ISB	1 Infiltrator Squad + 1 Pathfinder Team
005	Extraction — Covert	Rescue Mission	1 Garrison Platoon + Navy Troopers	1 Pathfinder team (4-6) + VIP
006	Convoy — Company Escort	Supply Run	1 Company + 2 Platoons + Drivers	2 Platoons Wilderness Fighters + HWS
007	Base Defense — Battalion	Full Assault	1 Battalion TK + 1 Company Army	SpecForce Battalion mix
008	Siege — 2 Battalions	Full Assault	2 Battalions TK + 1 Battalion Army	1 Battalion Rebels + 1 Company SpecForce
009	Planetary Invasion Phase 1	Planetary Assault	Landing company (2 Companies)	SpecForce forward teams
010	Planetary Invasion Phase 2	Planetary Assault	1 Regiment + armor	Alliance Army battalions
011	Last Stand / Atollon	W-01 Mandatory	Full Seventh Fleet ground component	Full Phoenix Squadron ground force

14.2 GM Ground Battle Setup

Before filming a Men of War battle:

1. Determine morale state for both sides (supply + headcount + commander — see Part 9)
2. Load appropriate GEM trigger scripts — STEADY or BROKEN

3. Count surviving transports to determine attacking force size
4. Read the force cards — place exactly the units listed. What is on the card is on the field.
5. Add Heavy Weapons Squads — 2 HWS per Company automatically. Place based on terrain and mission.
6. Select the Force Scaling Guide entry based on action type
7. Set up the map — attacker deploys at one edge, defender deploys in their position
8. Film the battle — do not favor either side. Let the scripts and dice determine the outcome.

14.3 Filming Guidelines

Cinematic Battle Production

The GM films both space and ground battles for the YouTube channel. Key guidelines:

GROUND (Men of War): Film from medium distance for platoon-scale battles. Pull back for battalion scale to show the full scope. Get close-up shots of scripted events — lieutenant deaths, squad routs, walker advances.

SPACE (AotR): Medium distance for capital ship engagements — show the full ship silhouette and weapon impacts. Close range for fighter engagements — the chaos only reads at close range. Switch between distances for variety.

POST-PRODUCTION: Edit the video and narrate the events as a campaign update. Note which forces won, what the casualties were, and what this means for the campaign state.

PART
15

SUPPLY

Supply represents the logistical health of a sector — fuel, ammunition, food, spare parts, and reinforcements. Supply status directly affects morale and is one of the most important strategic levers in the campaign.

15.1 Supply States

Supply State	Meaning	Morale Effect	Action Effect
NOMINAL	Full supply — sector is well-supported	No penalty	No restrictions
REDUCED	Supply disrupted — running on reserves	Morale shifts one tier down for all forces	Planetary Assault requires 1 extra AP
CRITICAL	Near-zero supply — desperate situation	Morale shifts two tiers down for all forces	Cannot initiate Planetary Assault. Only defensive actions.

15.2 Supply Chain

Every sector has supply chains listed on its sector card — arrows showing where supply comes FROM and where it goes TO. A sector's supply degrades automatically if its supply source sector is captured by the enemy or blockaded.

The GM traces supply chains at the end of every turn during Phase 4 cleanup. If the chain is broken the sector drops one supply tier. If the chain is restored (by retaking the sector or ending the blockade) supply recovers one tier per turn.

15.3 Actions Affecting Supply

Action	Effect on Supply
Supply Run (Rebel, 1 AP)	Restores target sector supply one tier. Can be intercepted by Imperial blockade or fleet.
Garrison Reinforcement (both, 1 AP)	Drops the reinforced sector's supply one tier. Unavoidable cost.
Blockade (Empire, 1 AP)	While blockade holds: all Rebel supply runs through that sector automatically fail. Sector supply degrades each turn.
Orbital Bombardment (Empire, 2 AP)	Destroys infrastructure. Target sector supply drops one tier immediately.
Sector Lockdown (Empire, 1 AP)	Seals a sector. Supply chains through that sector are cut for the duration.
Battle outcome	A decisive defeat in a sector can disrupt local supply chains as infrastructure is damaged.

**PART
16****WINNING THE CAMPAIGN****16.1 Imperial Victory Conditions**

The Empire wins the campaign by achieving ONE of the following:

Imperial Victory — Death Star Completion

The Death Star Construction Track reaches Step 5 — FULLY OPERATIONAL. The weapon is ready. The campaign ends immediately in an Imperial victory. This represents the timeline reaching Yavin 4. The Rebel Alliance failed to stop construction.

Imperial Victory — Alliance Collapse

The Rebel Alliance's Political Will reaches 0 and stays there for 3 consecutive turns. The scattered cells surrender or are destroyed. Without political leadership and public support the Rebellion dissolves before it becomes a true threat.

16.2 Rebel Alliance Victory Conditions

The Rebel Alliance wins the campaign by achieving ONE of the following:

Rebel Victory — Death Star Plans

The Rebels successfully raid Scarif (requires completing a Rescue Mission or Intel chain leading to the plans) AND the Death Star is at Step 3 or below. Representing the Rogue One timeline — the plans reach the Alliance fleet and the Battle of Yavin becomes possible.

Rebel Victory — Imperial Collapse

The Galactic Empire's Political Will reaches 0 and stays there for 3 consecutive turns. The campaign of suppression has become untenable — sectors are rebelling, officers are defecting, and the Emperor's grip on the galaxy is fracturing.

Rebel Victory — Alliance Formation Complete

All of the following conditions are met simultaneously: Mon Mothma has declared the Alliance (Event R-02 or diplomatic mission chain complete), the forming Alliance fleet has grown to Battle Squadron tier or above, AND the Rebel Alliance controls 8 or more sectors. This represents the Alliance being strong enough that the Empire cannot put it down — a long-term strategic victory even if the Death Star is not stopped.

APPENDIX A — COMPLETE ACTION REFERENCE

Action	Faction	AP	Key Rule
Move Commander	Both	1	Must already be in sector. Cannot use specialty same turn. Rating 5 = any distance for 1 PW.
Move Fleet	Both	1	Adjacent sector only per AP spent. Fleet must have transports to carry ground forces.
Move Ground Force	Both	1	Requires fleet with Gozantis (Imp) or GR-75s (Reb) in same sector.
Planetary Assault	Both	2	Full force committed. Space battle first if defender has fleet. Entry 009-011.
Full Assault	Both	2	Battalion scale. Entry 007-008. Does not require fleet superiority.
Fleet Engagement	Both	1	Space battle only. No ground forces involved.
Raid	Rebel	1	Small strike team — not full sector force. Entry 001-003.
Orbital Bombardment	Empire	2	Requires ISD in fleet. Drops target sector supply one tier.
ISB Crackdown	Empire	1	Can detect and disrupt Rebel cell insertions. Yularen provides 1 free per turn.
Garrison Reinforcement	Both	1	Player declares exactly what is added. GM approves. Drops sector supply one tier.
Sector Lockdown	Empire	1	Cuts supply chains through sector. Enemy actions there cost +1 AP next turn.
Death Star Advance	Empire	2	Advances track one step. Krennic provides 1 free advance per turn while active.
Intel Operation	Both	1	Reduces uncertainty in next engagement in that sector.
Blockade	Empire	1	Rebel supply runs through sector automatically fail while active.
Diplomatic Mission	Rebel	1	Attempt to bring neutral sector/faction to Alliance. Auto-succeeds with Mon Mothma present.
Cell Insertion	Rebel	1	Insert covert cell. 50% detection chance if Yularen is active.
Supply Run	Rebel	1	Restores target sector supply one tier. Fails if sector blockaded or under attack.
Rescue Mission	Rebel	1	Recover captured commander or agent. Entry 004-005 scale.
Fortify	Rebel	1	Defender morale bonus in next battle in that sector.
Emergency Deploy Rating 5	Both	0 + 1 PW	Rating 5 commander deploys anywhere in one turn. Costs 1 PW.

APPENDIX B — TRANSPORT QUICK REFERENCE

Transport	Faction	Troops	Walkers / Cargo	Notes
Gozanti-class Cruiser	Imperial	1 Platoon (36)	2 AT-AT OR 4 AT-ST on docking clamps	Can carry 4 TIE fighters instead of walkers. Cannot combine. Placed at fleet rear in AotR.
GR-75 Medium Transport	Rebel	1 Platoon (36-40)	None — infantry only	Sensor-resistant hull. Hard to detect on supply runs. Unarmed — priority target.

Surviving Transports → Landing Force Size

Surviving Transports	Landing Force	Men of War Entry
0	No ground forces land. Assault fails.	N/A
1-2	1-2 Platoons (36-72 troops) + walkers if configured	Entry 002-003
3-4	3-4 Platoons (~1 Company) + walkers	Entry 004-006
5-8	5-8 Platoons (~2 Companies) + walkers	Entry 007-008
9+	Full assault force — Battalion scale and above	Entry 009-011

APPENDIX C — MORALE STATE QUICK REFERENCE

State	Conditions	GEM Script	Commander Effect
HIGH	Nominal supply + 75%+ strength + commander	STEADY — hold on LT death	Already included in HIGH conditions
STEADY	Nominal supply + 75%+ strength, no commander	STEADY — hold on LT death	+Commander = HIGH
SHAKEN	Reduced supply OR 50-75% strength	BROKEN — rout on LT death	+Commander = STEADY
BATTERED	Critical supply OR below 50% strength	BROKEN — rout on commander death	+Commander = SHAKEN
BROKEN	Below 25% strength OR Critical + no commander	Auto-retreat when engaged	+Commander = BATTERED

APPENDIX D — RETREAT CASUALTIES

Retreat Type	Situation	Casualties
Clean Retreat	Declared in Phase 3 immediately — no prior contact in this sector	10% of force lost
Fighting Retreat	Forces were already engaged in previous turns in this sector	25-40% of force lost
Desperate Retreat	Force already below 50% strength before retreat	50%+ of force lost
Encircled	Interdictor present — gravity wells active	Cannot retreat. Must fight or surrender.
Meeting Engagement Turn 1	First turn of a Meeting Engagement	No retreat available. Fight it out.

APPENDIX E — COMMANDER CASUALTY ROLL

Roll 1d6 after every battle for each named commander who participated. Add battle outcome modifier.

Roll (after modifiers)	Result	Effect
1	Killed in Action	Commander removed permanently. Faction loses 1 PW.
2	Captured	Prisoner of the enemy. Enemy gains 2 PW. Can be rescued (Rescue Mission) or exchanged.
3	Wounded	Out of action 2 turns. Command Rating -1 while recovering.
4	Shaken	Command Rating -1 for next battle only.
5	Unharmed	No effect.
6+	Heroic	Faction gains +1 PW.

Battle Outcome Modifiers:

Outcome	Modifier
Victory — Light losses	+2
Victory — Moderate losses	+1
Defeat — Managed withdrawal	-1
Defeat — Heavy losses	-2
Total loss / rout	-3

APPENDIX F — HEAVY WEAPONS RULE SUMMARY

Every Company-sized formation or larger automatically has 2 Heavy Weapons Squads (HWS) attached. No force card edit required — this is a standing rule for all ground battles.

Formation Size	Headcount	HWS Attached	Notes
Squad	9 men	0 HWS	Rifles only. No heavy weapons.
Platoon	36 men	0 HWS	Rifles only. Add via Garrison Reinforcement if needed.
Company	144 men	2 HWS	Standard attachment. Automatic — no AP cost.
Battalion (4 Companies)	576 men	8 HWS	2 per Company. GM distributes across the formation.
Regiment (4 Battalions)	2,304 men	32 HWS	2 per Company throughout.
Battlegroup (4 Regiments)	9,216 men	128 HWS	Significant heavy weapons capability.

Heavy Weapons Squad Composition (9 men per HWS):

- E-Web Heavy Repeating Blaster crew — 3 men (emplaced, must set up before firing)
- PLX-1 Portable Missile Launcher team — 3 men (anti-vehicle, anti-air)
- DLT-19 Heavy Blaster team — 3 men (long-range suppression fire)

To add an HWS to a Platoon or smaller force: declare Garrison Reinforcement (1 AP). Drops sector supply one tier.
